

SUSHRUT THORAT

CONTACT INFORMATION	ADDRESS: 106, Convitto A. Barelli, via Della Gora 9 Rovereto, TN 38068, Italy	MOBILE: +39-380-376-4733 EMAIL: sushrut.thorat94@gmail.com WEBPAGE: http://novelmartis.github.io
INTERESTS	Unsupervised Learning, Biological Neural Networks, Information Representation in the Brain, Subjective Experience	
EDUCATION	Masters in Cognitive Neuroscience Center for Mind/Brain Sciences (CIMEC), University of Trento, Italy	<i>Ongoing</i>
	B.Tech. in Engineering Physics Department of Physics, Indian Institute of Technology - Bombay, India	<i>August, 2015</i>
PUBLICATIONS	Implementing a Reverse Dictionary, based on word definitions, using a Node-Graph Architecture (paper) <i>Co-author: Varad Choudhari</i> <i>Conference: International Conference on Computational Linguistics, Osaka, Japan</i> December, 2016 We designed a method to process any forward language dictionary to build a reverse dictionary, using a n-level reverse search on a graph, through word definitions. The reverse dictionary takes any input phrase and outputs a set of words with high semantic correlation to the input, and performs atleast as well as the state-of-the-art.	
	Arithmetic Computing via Rate Coding in Neural Circuits with Spike-triggered Adaptive Synapses (paper) <i>Co-author: Bipin Rajendran</i> <i>Conference: International Joint Conference on Neural Networks, Killarney, Ireland</i> July, 2015 We presented spiking neural circuits with spike-time dependent adaptive synapses capable of the arithmetic operations - addition, subtraction, multiplication and division, as well as other non-linear transformations - exponentiation and logarithm, for time dependent signals in real-time.	
WORK EXPERIENCE	Content Developer <i>Employer: Avanti Fellows, Delhi</i> Summer 2013 Studied and developed ConceptTests as required by Avanti's Learning Centre Curriculum. The Curriculum is based on Eric Mazur's <i>Peer Instruction</i> model which he successfully employed at Harvard University.	
PROJECTS	Principles of information representation in the human visual system as compared with Convolutional Neural Networks <i>Guide: Marius Peelen</i> <i>Ongoing</i> Representations in the CNN layers correlate highly with the visual ventral stream representations, even in the case of stimuli confounding visual features as in Proklova, et.al., 2016. Visual features are rich contributors to semantic representations. This project specifically aims to assess the level of visual contribution to the representation of 'animacy' in ventral temporal cortex, using a CNN as a proxy for feed-forward visual information.	
	Independent Study: The neural basis of cross-modal numerosity perception (report) <i>Guides: Marco Buiatti and Manuela Piazza</i> <i>Spring 2016</i> The project aims to understand the said neural basis using frequency-tagging EEG with newborn babies. I developed an algorithm for generating the stimuli, which accounts for the variance in the non-numerical factors (item size, sparsity, etc.) which affect number cognition, and was involved in conducting the pilot EEG experiment on adult subjects.	

Senior Thesis: A Spiking Neural Network as a Quadcopter Flight Controller ([report](#))
Guide: Bipin Rajendran *Spring 2015*
 We developed a model-based control scheme for velocity-waypoint navigation in the presence of wind, noisy and delayed IMU data, for a quadcopter. We built small spiking neural networks with simple spike-triggered adaptive synapses for implementing arithmetic operations. **We wrote a paper explaining these networks, which has been published in the proceedings of IJCNN'15.** We outlined a method of developing a spiking neural network for quadcopter Control to analyse the gain in computational power and stability provided by spike-based networks.

Junior Thesis: On Quantum Computation ([report](#), [presentation](#))
Guides: Tathagat Avatar Tulsi and Suddhasatta Mahapatra *Autumn 2013*
 Wrote a report on, and presented the basics of Quantum Computation viz. Quantum Circuits and Quantum Algorithms, and their applications, primarily based on the first two parts of the book 'Quantum Computation and Quantum Information' by Nielsen and Chuang.

ATTEND(-ED/-ING) WORKSHOPS **IBRO-SIMONS Computational Neuroscience Imbizo (ISi-CNI)** *January, 2017*
 Cape Town, South Africa

Computational Approaches to Memory and Plasticity (CAMP) *June, 2015*
 Bangalore, India

ACADEMIC ACHIEVEMENTS

- Ranked **721 among 450,000 students** in the Joint Entrance Examination (**JEE, 2011**) conducted towards admission to the IITs.
- Awarded the **KVPY scholarship** (2010), awarded to **150 promising young researchers** throughout India, by the Dept. of Science & Technology, Govt. of India.
- **Winner** at the **Annual All India Web-Design Contest** (2008) hosted by SJIIT, Pune (India).
- Awarded the **NTSE scholarship** (2007), awarded to **1000 students** throughout India with **excellent all-round skills**, by the National Centre for Educational Research and Technology, Govt. of India.

TECHNICAL SKILLS **Programming:** Python (TensorFlow), MATLAB (PsychToolbox, MatConvNet, SPM)
Web-Design: HTML5, CSS3, JavaScript
Neuro-Imaging: EEG, fMRI

COURSE PROJECTS **The functional relevance of neuronal clustering** ([report](#)) *Autumn 2016*
Neuroscience (Daniel Adams)
Understanding human visual processing with deep neural networks ([presentation](#)) *Spring 2016*
Neural Decoding (James Haxby)
Predisposition to towards-gravity periodic motion in chicks ([report](#)) *Autumn 2015*
Foundations of Cognitive Psychology (Sang Ah Lee)
Non-Linearity in Neural Systems ([presentation](#)) *Autumn 2014*
Non-linear Dynamics (Anirban Sain)
Gesture Lock ([report](#)) *Autumn 2013*
Micro-controllers Lab (Pradeep Sarin)

OTHER ACTIVITIES

- Co-founded **Neuro Mondays** in 2015, a weekly meeting at CIMeC, where students discuss a review, a specific paper, or their work about cutting-edge ideas in neuroscience and psychology.
- Maintain a blog, **Meadows**, of my writings.
